

Tower™ Flammable Safety Cabinet

Product Images

Short Description

- Adjustable Legs: 4-inch adjustable legs allow placement over floor or wall ventilation, facilitating easy cleaning and protection from moisture
- Compliant Construction: Reinforced double-wall construction made from 18-gauge steel meets NFPA Code 30 and OSHA specifications
- Chemical Resistance: Lead-free, high-gloss, baked-on powder finish provides superior protection against chemical corrosion

- **Easy Mobility:** Cabinets can be easily moved with a forklift or pallet jack, enhancing workplace flexibility
- **Door Options:** Available with manual closing or self-closing doors to meet specific safety and compliance needs

Description

Eagle standard flammable safety cabinets with legs are designed to provide safe and compliant storage for hazardous materials, meeting NFPA Code 30 and OSHA specifications. These cabinets feature 4-inch adjustable legs, allowing them to be placed over floor or wall ventilation, which is beneficial in environments where moisture or airflow is a concern. The added height also makes it easy to clean or sweep under the cabinets, and they can be easily moved with a forklift or pallet jack.

These cabinets are constructed with reinforced double-wall construction made from 18-gauge steel and are coated with a lead-free, high-gloss, baked-on powder finish for superior protection against chemical corrosion. To configure your safety cabinet, select from various capacities to fit your storage needs, ranging from 12 to 90 gallons. Additionally, choose between manual closing or self-closing doors to ensure compliance with your safety requirements. Self-closing doors offer enhanced safety by automatically closing and latching in emergency situations, minimizing human error and ensuring that the cabinet remains properly closed.

Eagle safety cabinets with legs are designed to meet the complex requirements of handling and storing hazardous materials, providing a reliable solution for industries such as laboratories, manufacturing facilities, and chemical processing plants. By configuring your cabinet, you ensure a safe and compliant storage solution tailored to your unique needs. All Eagle cabinets meet NFPA Code 30 and OSHA requirements, ensuring peace of mind and reliable performance.
